The global UV Photoinitiators market size is predicted to grow from US\$ 731 million in 2025 to US\$ 847 million in 2031; it is expected to grow at a CAGR of 2.5% from 2025 to 2031.

Photoinitiator, known as a photosensitizer or the photocuring agent, it is a type of compound which is capable of absorbing energy of certain wavelengths in the ultraviolet region (250 ~ 420nm) or in the visible region (400 ~ 800nm) to generate free radicals, cations, giving rise to a crosslinking and polymerization of the monomer. Photoinitiator is a key component of light-curing materials, which plays a decisive role to the light curing speed.

IgM resins, Tianjin jiuri new materials, tronly, Hubei gurun, DBC, Zhejiang Yangfan new materials, Jingangtai chemical and Arkema are the main suppliers of UV Photoinitiators. In 2019, IgM resins accounted for the largest proportion of the market share, about 23%, followed by Tianjin jiangri new materials, accounting for about 21% of the market share.

In terms of product regions, the global UV Photoinitiators market will be dominated by China in 2019, accounting for about 80% of the total market share. Europe is the second largest regional market, accounting for about 15% of the total market share.
