UV printing ink, also known as ultraviolet printing ink, is a type of ink that cures or dries quickly when exposed to ultraviolet (UV) light. This curing process is initiated by photoinitiators in the ink formulation, which react to the UV light and lead to the polymerization or crosslinking of the ink, transforming it from a liquid to a solid state. UV printing inks are widely used in various printing applications due to their fast curing, vibrant colors, and suitability for different substrates.
