Ultraviolet rays are a form of electromagnetic radiation. Ultraviolet radiation is present in sunlight and can cause some damage to eye health. UV protective lenses are specially designed lenses that can protect the lenses from harmful ultraviolet rays.

There are three types of ultraviolet light: UVA, UVB and UVC. UVB rays cause more surface damage, such as sunburn, which puts you at risk for skin cancer and melanoma. The amount of UVA rays is much higher (up to 500 times that of UVB rays) and can penetrate surfaces, deep into your eyes and skin. Ultraviolet radiation can cause skin and eye damage, leading to cataract formation and cancer. Exposure to ultraviolet rays from the sun can accelerate macular degeneration of the eye, among other things. The enhancement of people's awareness of health protection will promote the development of this market.
