The global UV Toothbrush Cleaners market size is predicted to grow from US\$ 177 million in 2025 to US\$ 308 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

In 2025, global production of UV toothbrush cleaners reached 8.23 million units, with an estimated average selling price of US\$22 per unit. UV toothbrush cleaners are small household disinfection devices that utilize ultraviolet light, especially the UV-C band, to perform surface antibacterial, sterilization, or hygienic treatment on toothbrush heads, toothbrush holders, razor heads, or small oral care accessories. They typically consist of UV lamps/tubes, a closed disinfection chamber, a toothbrush fixing structure, a battery or plug-in power supply system, control circuitry, a safety switch to prevent accidental activation, a wind/hot air drying module, and a wall-mounted/countertop/travel casing. They are mainly used for household toothbrush head hygiene management, electric toothbrush head storage, cleaning children's and orthodontic toothbrushes, preventing travel toothbrush contamination, drying toothbrushes in humid bathroom environments, dental clinic patient care kits, and hotel and personal care gift sets. The upstream of the industry chain includes UV-C LED/UV lamps, quartz light-transmitting materials, reflective inner cavity materials, ABS/PP plastics, PC transparent parts, lithium batteries, PCBs, power management chips, microswitches/Hall sensors, fans, PTC heating elements, USB interfaces, waterproof seals, adhesive back panels, packaging materials, and molds. The midstream includes ID design, structural design, UV light path design, anti-accidental opening safety design, injection molding, electronic assembly, UV illuminance testing, aging testing, whole-machine safety testing, OEM/ODM manufacturing, and brand operation. The downstream includes e-commerce platforms, brand websites, pharmacies and personal care retail, home appliance channels, dental clinics, cross-border e-commerce, and

hotel supplies channels. Gross profit margin is approximately 20%-40%.

Globally, North American and European consumers prioritize hygiene, safety certifications, bathroom storage, and high-end electric toothbrush accessories, resulting in a higher proportion of wall-mounted, multi-functional, and branded products. In the Asia-Pacific region, the Chinese market is experiencing rapid sales growth, driven by the small appliance supply chain, cross-border e-commerce, maternal and infant family consumption, and mid-to-low-priced smart hardware. Markets like Japan, South Korea, and Singapore show high acceptance of portable, compact storage, and bathroom hygiene products. Future industry trends include: First, UV-C LEDs will replace traditional mercury lamps, with products moving towards miniaturization, low power consumption, long lifespan, and environmental friendliness. Second, simple UV irradiation will upgrade to 'UV disinfection + air drying/hot air drying + sealed storage + automatic circulation.' Third, wall-mounted multi-toothbrush cleaners, travel-sized portable disinfection boxes, and electric toothbrush charging docks integrating UV disinfection will become three mainstream product lines. Fourth, marketing will shift from simply focusing on 'sterilization rate' to emphasizing UV wavelength, irradiation dosage, leak-proof sealing, safety switches, and third-party testing and certification compliance.
