The UV weathering test chamber is an accelerated aging test equipment that simulates sunlight ultraviolet radiation and environmental conditions (such as temperature and humidity). It is used to evaluate the weather resistance, fading, chalking or performance degradation of materials (such as plastics, coatings, rubber, textiles, etc.) under long-term exposure to ultraviolet rays. Its core is to simulate the solar spectrum through UV lamps (such as UVA-340 or UVB-313), combined with condensation or spraying functions to reproduce the humid environment, greatly shortening the natural aging test cycle.
