UV-C Disinfection System employs UV light to eliminate a wide range of pathogens including bacteria, mold and viruses. The wavelength of UV-C is 100-280nm, which belongs to the high frequency short wave. When the wavelength is 265nm, the sterilization effect is the strongest. It does so by deactivating the DNA and RNA of bacteria, viruses along with other harmful Microorganisms. It can quickly help decrease the microorganism risk in a room. The common ultraviolet lamps in the UV-C Disinfection System on the market include low-pressure mercury lamps and UVC LEDs. UVC LEDs have the advantages of low power consumption and high disinfection efficiency, and have gradually become a new trend of UV-C Disinfection System. UV-C applied into HVAC and water treatment is out of the scope of the report.
