The global UVLED Degumming Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The UVLED degumming machine is a light source curing equipment that cures the surface of the UV cutting film tape to complete the automatic degumming of the wafer chip. It is a cold light source LED ultraviolet degumming curing lamp. The standard product of UV debonding machine is 365nm ultraviolet curing equipment, which is mainly used in the production and processing of semiconductor chips. Before chip scribing, the wafer needs to be fixed on the frame with dicing film. After the wafer processing process, it is necessary to use an ultraviolet light source to irradiate the fixed dicing film to complete the curing of the UV glue on the film, which is convenient for wafer slicing for subsequent packaging processes.

United States market for UVLED Degumming Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for UVLED Degumming Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
