CT tubes (Computed Tomography tubes) are key components of CT scanners, which are medical imaging devices that produce cross-sectional images of the body. These tubes generate X-rays that pass through the patient's body, and detectors on the opposite side measure the amount of X-rays that pass through different tissues. The data from the detectors are then used to create detailed 3D images. CT tubes are defined by the amount of heat they can endure, measured in MHU (Mega Heat Unit). The bigger the number of MHU, the more heat the tube can take. This report collect market data of CT Tubes with ? 5MHU.
