The global V-groove Pulley market size is predicted to grow from US\$ 1370 million in 2025 to US\$ 1855 million in 2031; it is expected to grow at a CAGR of 5.2% from 2025 to 2031.

A V-groove pulley, also known as a V-belt pulley or a V-groove sheave, is a type of pulley commonly used in machinery and mechanical systems to transmit power between a rotating shaft and a V-belt or V-ribbed belt. These pulleys have a V-shaped groove or channel in their circumference that matches the profile of the V-belt or V-ribbed belt. The V-groove helps to maintain proper belt alignment and prevent slipping, ensuring efficient power transmission.

With the growing adoption of automation and Industry 4.0 principles in manufacturing and industrial processes, the demand for precision and reliability in power transmission components, including V-groove pulleys, has increased. Integrated monitoring and control systems for pulley-driven machinery have become more common.
