The global V2G Automotive Inductive Wireless Charging Systems market size is predicted to grow from US$ 169 million in 2025 to US$ 995 million in 2031; it is expected to grow at a CAGR of 34.3% from 2025 to 2031.

V2G Automotive Inductive Wireless Charging System is an important technological innovation for the future development of smart grids and electric vehicles (EVs).V2G technology allows EVs to not only absorb power from the grid for charging, but also feed power from the battery back into the grid to provide auxiliary services, helping to balance the load on the grid and improve energy efficiency. Inductive wireless charging technology, on the other hand, realises energy transmission through electromagnetic induction, eliminating the need for a physical connection and enhancing user convenience and system flexibility. Combining V2G technology with wireless charging has the potential to significantly improve energy management, optimise grid operations and accelerate the adoption of renewable energy.
