MOPA pulsed fiber laser is consisting of two main parts: the main oscillator and the power amplifier. The main oscillator is the starting point of the MOPA system. It is responsible for generating the initial laser signal, usually a low-power, high-quality pulsed laser. This laser usually has a stable wavelength and frequency. The output of the main oscillator is fed into the power amplifier. The task of the power amplifier is to amplify the low-power main oscillator output to high power, usually through processes such as stimulated emission, to obtain high-energy laser pulses.
