The global Vaccines Isothermal Boxes market size is predicted to grow from US\$ 121 million in 2025 to US\$ 184 million in 2031; it is expected to grow at a CAGR of 7.2% from 2025 to 2031.

All vaccines lose potency over time. As the rate of loss is temperature-dependent, the World Health Organization (WHO) recommends vaccine products be transported and stored between 2°C and 8°C. Maintaining this range from the point of manufacture to the point of administration requires a temperature-controlled supply chain or cold chain—a global distribution network of equipment and procedures for sustaining product quality (potency) during transport, storage, and delivery.

Vaccines Isothermal Boxes is an innovative insulated packaging used for the transportation of Vaccine at controlled temperatures. It efficiently preserves the products from thermal and physical shocks, and most pathogens cannot survive at sub-zero temperatures.

Global Vaccines Isothermal Boxes key players include B Medical Systems, AOV International, EBARA CO. Ltd., Qingdao Leff, Termo-Kont, etc. Global top five manufacturers hold a share about 20%.

India is the largest market, with a share about 20%, followed by Europe and China, both have a share over 25 percent.

In terms of product, Under 5 Litres is the largest segment, with a share about 75%. And

in terms of material, the largest material is Polyurethane (PU), followed by Others.
