A vacuum suction roller is a specialized industrial roller used in web-handling systems to control, transport, or apply tension to thin, continuous materials such as films, foils, papers, or textiles. It features a perforated outer shell connected to a vacuum source, which draws the web material onto the roller's surface using negative pressure. This suction ensures precise grip and alignment without requiring direct mechanical force, making it ideal for delicate or single-sided contact applications, such as coating, laminating, or converting processes. The vacuum level, perforation pattern, and roller surface can be customized for specific materials and production needs.
