The global Vacuum Battery Slurry Mixer market size is predicted to grow from US\$ 465 million in 2025 to US\$ 934 million in 2032; it is expected to grow at a CAGR of 10.7% from 2026 to 2032.

A vacuum battery slurry mixer is specialized equipment used in lithium-ion battery manufacturing to produce highly uniform electrode slurries under controlled vacuum conditions. By removing air from the mixing chamber, the vacuum environment prevents bubble formation, minimizes oxidation, and enhances the dispersion of active materials, binders, and conductive additives. This approach results in stable slurry viscosity, improved particle wetting, and better overall homogeneity—key factors that directly affect electrode coating quality, energy density, and long-term battery performance.

In 2024, global vacuum battery slurry mixer production reached approximately 30.41 k units, with an average global market price of around US\$ 14302 per unit. And global vacuum battery slurry mixer production capacity reached approximately 35 k units. The average gross margin in this industry reached 27.14%.

The upstream of the Vacuum Battery Slurry Mixer industry includes lithium-ion battery raw materials and precision mixing components. Core inputs are cathode/anode active materials (NCM, LFP, graphite), conductive additives (carbon black, CNTs), polymer binders (PVDF, SBR/CMC), and solvents such as NMP or water. Equipment components—vacuum pumps, sealing systems, high-torque motors, mixing blades, and PLC control units—also play a critical role in slurry quality. Representative upstream suppliers include BASF (active materials), Kuraray (binders), and Edwards Vacuum (vacuum systems).

Downstream users are lithium-ion battery manufacturers producing electrodes for EVs, energy storage, and electronics. Vacuum mixing is essential for removing entrapped air, improving slurry uniformity, and increasing coating consistency, which directly affects battery capacity and cycle life. Demand grows with gigafactory expansion and higher-energy-density battery designs. Key downstream companies include CATL, LG Energy Solution, and Samsung SDI, all of which deploy vacuum slurry mixers in large-scale electrode production lines.
