The global Vacuum Blasting Machine market size is predicted to grow from US$ 66.49 million in 2025 to US$ 94.24 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

A Vacuum Blasting Machine, also known as dust-free blasting machine or closed-loop abrasive blasting system, is a surface treatment device that integrates blasting and dust collection in a single operation. It uses a blast gun to propel abrasive media onto the surface, while simultaneously recovering the spent media, dust, and debris through a vacuum system. The recovered materials are typically separated, filtered, and either discarded or recycled.

This closed-cycle system significantly reduces airborne dust and minimizes environmental contamination, making it ideal for operations in confined spaces, sensitive environments, or areas where dust control is critical (e.g., indoors, on-site in public areas, or near precision machinery).

Vacuum blasting is commonly used for surface preparation, rust and paint removal, and cleaning of metal, concrete, or composite surfaces, especially in industries like marine, aerospace, nuclear, construction, and restoration.

United States market for Vacuum Blasting Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
