The global Vacuum Cleaner Battery market size is predicted to grow from US\$ 2703 million in 2025 to US\$ 3723 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2025, the global production of vacuum cleaner battery reached approximately 1.1 million kWh, with an average global market price of around US\$2.5/Wh. In the same year, the global total production capacity of vacuum cleaner battery reached 1.37 million kWh. The industry average gross profit margin of this product reached 27%. Vacuum cleaner batteries are energy storage units specifically designed to power cordless/portable vacuum cleaners. They are typically lithium-ion (Li-ion) batteries, with a smaller number using nickel-metal hydride (NiMH) batteries. Their core function is to provide high-rate discharge capability for the motor system, enabling stable operation of the vacuum cleaner in high-power suction mode, while also meeting requirements for lightweight design, long battery life, and fast charging. With the increasing popularity of cordless vacuum cleaners, batteries have become one of the key components for overall machine performance.

The upstream of the vacuum cleaner battery industry chain mainly includes suppliers of basic metal materials such as lithium, cobalt, and nickel, as well as companies producing key battery materials such as cathode materials, anode materials, separators, and electrolytes. The midstream involves cell manufacturing and battery pack integration, responsible for cell production, module design, BMS integration, and packaging. The downstream consists of vacuum cleaner manufacturers, ultimately reaching the end consumer market through online retail, e-commerce platforms, and home appliance channels.

As global cleaning appliances move towards cordless, intelligent, and miniaturized designs, the penetration rate of cordless vacuum cleaners continues to increase, driving the growth in demand for high-performance lithium batteries. Future industry growth will primarily come from three aspects: first, structural upgrades replacing corded vacuum cleaners; second, improved lithium battery energy density driving extended battery life; and third, the upgrading of consumer demand for household cleaning appliances in Europe, America, and the Asia-Pacific region. Meanwhile, fast charging technology, high-rate discharge, and battery safety will become the core of technological competition. Overall, the market remains in a stable growth phase, concentrating on high-end and platform-based supply.
