The report requires updating with new data and is sent in 48 hours after order is placed.

The global Vacuum Degreasing Machines market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Vacuum Degreasing Machine extracts all the air out of the system and seals off the work chamber from ambient atmosphere, thus no operators are exposed to any fugitive emissions. The work is processed in a sealed chamber so no solvent is lost during processing.

Then, due to the vacuum, the boiling point of the solvent is lowered so it will boil and vaporize at a lower temperature. Therefore, less energy is used to heat the chemistry, which results in energy savings (smaller carbon footprint).

With the air removed (when the work chamber is filled with solvent and parts are immersed), the ultrasonics are more efficient in impinging on the parts due to no interference by air in the chemistry as with a typical open-top degreaser. Enhanced ultrasonics activity equals enhanced cleaning.

United States market for Vacuum Degreasing Machines is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Vacuum Degreasing Machines is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
