Vacuum distillation unit is a piece of equipment that performs distillation under vacuum conditions. By reducing the system pressure, it lowers the boiling point of liquids, thus more effectively separating high-boiling-point, heat-sensitive or high-viscosity liquid mixtures. This device is widely used in petroleum refining, chemical engineering and other related fields. It can effectively separate heavy oil products that are difficult to handle through atmospheric distillation, improve resource utilization and product quality, and at the same time reduce energy consumption and environmental impact.

United States market for Vacuum Distillation Unit is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Vacuum Distillation Unit is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
