Vacuum Encapsulation Laminator is innovative to attach dry film under vacuum and develop the heating air bag laminating. Vacuum / pressure / temperature & time can be independently set up in accordance with material application, and the secondary surface leveling and laminating can be expanded. Before the film is applied, the dry film to be attached shall not contact with the wafer in the cavity until the cavity is vacuumized, and the soft air bag shall be pressurized to attach the film, so as to avoid the problem of bubble or poor filling of dry film due to the way of pre film and vacuum pressing.

The global Vacuum Encapsulation Laminators market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
