The global Vacuum Exhaust Valve market size is predicted to grow from US\$ 2338 million in 2025 to US\$ 3213 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

The vacuum exhaust valve is a powered rapid intake and exhaust valve suitable for various irrigation systems. In the system water injection type, the air valve removes a large amount of air in the pipeline; in the system exhaust type, the air valve sucks in a large amount of air to prevent vacuum and negative pressure. The valve adopts advanced composite gas dynamics design with rapid intake and exhaust, which can avoid air accumulation and prevent the formation of negative pressure. The vacuum exhaust valve is made of stainless steel and has the characteristics of small size, simple structure and reliable performance. Vacuum exhaust valves are generally used in irrigation system pipes and semiconductor manufacturing equipment. In 2025, global Vacuum Exhaust Valve production reached approximately 4.6 million units with an average global market price of around US\$520 per unit.

The future development trends of the Vacuum Exhaust Valve industry will revolve closely around high-end manufacturing and green low-carbon transformation. According to the 'Implementation Opinions on Promoting the Innovative Development of Future Industries' issued by the National Development and Reform Commission, the localization of high-end equipment has become a priority. As a critical fluid control component, the Vacuum Exhaust Valve will accelerate its upgrade towards high precision, long service life, and intelligence to meet the stringent requirements of strategic emerging industries such as semiconductors and aerospace. The 'Implementation Plan for Synergistic Reduction of Pollution and Carbon Emissions' published by the Ministry of Ecology and Environment explicitly requires the

improvement of energy efficiency in the industrial sector, prompting companies to emphasize low leakage and corrosion resistance in product design to align with environmental regulations and energy conservation goals. From the perspective of corporate revenue and profit, leading enterprises such as Suvalve stated in their annual reports that high-end special valves with significant technical barriers yield substantially higher gross margins than general products. This drives manufacturers to increase R&D investment and achieve import substitution through process innovation to capture higher added value. Meanwhile, official corporate news indicates that digital transformation has become an industry consensus, with intelligent Vacuum Exhaust Valves integrating sensors and remote monitoring functions emerging as a new market growth point, aiding companies in expanding service-oriented businesses. Overall, the dual drive of policy guidance and market demand is propelling the industry toward localization, intelligence, and green development, and enterprises possessing core technological advantages will establish sustainable profit growth drivers.
