Vacuum isolators, also known as vacuum interrupters or vacuum circuit breakers, are electrical switching devices used in high-voltage applications to interrupt or break electrical circuits under vacuum conditions. These devices are designed to safely and effectively disconnect electrical circuits to protect equipment and personnel from electrical faults or overcurrent situations.

The increasing adoption of renewable energy sources, such as solar and wind power, was driving the demand for vacuum interrupters. These devices are used in the protection and isolation of electrical circuits in renewable energy installations.
