The multi-chamber vacuum continuous sintering furnace is a high-end thermal processing system designed for continuous sintering of materials under vacuum or controlled atmospheres (e.g., N?, H?, Ar). It typically consists of multiple independent temperature zones—such as preheating, ramp-up, high-temperature sintering, and cooling chambers—and integrates a push-rod or conveyor system to ensure continuous feeding and discharging of workpieces. Compared to traditional batch-type sintering furnaces, this system offers improved production efficiency, reduced thermal stress on materials, precise atmosphere control, and higher temperature uniformity.
