The global Vacuum and Mop Combo market size is predicted to grow from US\$ 288 million in 2025 to US\$ 2185 million in 2032; it is expected to grow at a CAGR of 34.2% from 2026 to 2032.

Unlike vacuum cleaners which collect dry dirt and debris, or robot mops which just push a dirty cleaning pad around your floor for a while, mop vacs (also called ?vacmops? or ?wet-dry vacuum cleaners?) suck up dirt and debris while also mopping hard floors with a constant supply of fresh water and cleaning solution. The fresh water comes from the machine?s fresh water tank and works with a rotating soft brush roller to mop the floor. In the same pass, the mop vac sucks the used water back into a separate dirty water tank where it filters out any solid debris.
