Vacuum OLTC is a tap changer that uses vacuum as an arc extinguishing medium. It changes the effective number of turns of the transformer and adjusts the voltage ratio by leading out several taps in the transformer winding and switching from one tap to another through a vacuum tube without interrupting the load current. Its working principle is based on vacuum arc extinguishing technology, that is, in a vacuum environment, the arc can be extinguished quickly, thus realizing oil-free and pollution-free tap changer operation.

The global Vacuum OLTC market size is projected to grow from US\$ 600 million in 2024 to US\$ 747 million in 2030; it is expected to grow at a CAGR of 3.7% from 2024 to 2030.
