Vacuum ovens are laboratory equipment used for drying or heating applications. In a vacuum oven, the thermal process occurs in a chamber where the atmospheric pressure is lowered using a vacuum pump and the unit can achieve temperatures of up to 2,500°C. The underlying principle of the vacuum oven is that at a reduced pressure (25-100 mm Hg), the temperature drops leading to vaporization of water leading to more efficient drying in comparison to a conventional oven.

The oven is used for a wide range of purposes such as electroplating, desiccating, vacuum embedding, dry sterilization, outgassing liquids, and electronic component processing.
