Vacuum plasma titanium powder is a type of titanium powder that is produced using a process called vacuum plasma spraying. This process involves heating titanium wire or powder in a vacuum chamber and then spraying the molten titanium onto a substrate using a plasma jet. The resulting powder is highly pure and has a spherical shape, which makes it ideal for use in a variety of applications, including additive manufacturing, surface coating, and biomedical implants.

The advantages of vacuum plasma titanium powder include its high purity, uniform particle size distribution, and excellent flowability. These properties make it easier to process and use in manufacturing applications, and also result in improved performance and reliability of the final product.
