Vacuum Pull Rolls, also known as vacuum tension rolls or suction rolls, are specialized components used in web-handling systems to convey delicate or lightweight materials—such as films, foils, or paper—without slipping or damaging the substrate. They use a perforated outer shell connected to a vacuum chamber to gently pull the web against the roll surface, ensuring consistent tension and precise control. Vacuum pull rolls are especially useful when only one side of the material can be contacted, or when traditional nip or friction-based rolls may cause wrinkles, slippage, or damage. They are widely used in coating, laminating, slitting, and printing applications.

United States market for Vacuum Pull Rolls is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
