The global Vacuum Switch Vacuum Degree Tester market size is predicted to grow from US\$ 254 million in 2025 to US\$ 343 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

The vacuum switch vacuum degree tester is a specialized testing device used in power systems and industrial fields. Its main function is to quantitatively measure the vacuum level of vacuum interrupters without disassembling the vacuum circuit breaker. Based on the principle of magnetron discharge, it measures the ion current by applying pulsed high voltage and a synchronous magnetic field to determine whether the vacuum tube has failed. It features accurate detection and simple operation.

Its upstream core suppliers include electronic components such as high-performance microcontrollers (MCUs), high-voltage pulse generators, vacuum pressure calibration sensors, magnetic control coils, and precision analog-to-digital converter modules (ADCs). The stability and anti-interference capabilities of these components directly determine the instrument's measurement accuracy.

Global sales are projected to reach approximately 130,000 units in 2025. Product prices depend on factors such as accuracy, brand, and functionality, with basic models priced at around \$1,500-\$3,000, while intelligent high-end models can exceed \$8,000. The industry's gross profit margin is in the range of 25%-40%.

The frequent switching operations of wind and solar power plants pose a severe challenge to the mechanical life and sealing performance of vacuum interrupters, directly leading to a large-scale demand for regular inspections. Technologically, the maturity of magnetron discharge technology has solved the problem of on-site

quantitative measurement without disassembling the interrupter, significantly reducing maintenance costs. Furthermore, increasingly stringent national and power industry standards mandate regular vacuum level testing of operating vacuum switches, and this policy direction provides stable growth potential for the testing equipment market.
