## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

While standard vapor degreaser equipment provides adequate results when it comes to parts cleaning, it also has high emissions and energy consumption, as well as lowered compatibility with various solvent types. Vacuum Vapor Degreasers have dramatically improved upon and replaced the traditional open tank method of vapor degreasing by placing the process in a sealed vacuum environment, which employs a programmed sequence of heated vapors and cool solvent sprays. Emissions are virtually eliminated.
