Vaginal discharge detector is an in vitro diagnostic instrument integrating optics, mechanics, electronics and automatic control. Vaginal secretion detector is mainly used for rapid detection of hydrogen peroxide, sialidase, leukocyte lipase, ?-glucuronidase

and coagulase in vaginal fluid. When the instrument and the five-item joint determination kit for aerobic vaginitis/bacterial vaginosis detect negative and positive female vaginal fluids, the reaction holes will show different color reactions due to the different degrees of lesions. Negative and positive results can be obtained by distinguishing colors. The analyzer uses light-sensitive elements to measure color values ??by receiving reflected light. The analyzer obtains negative and positive results by comparing the different color reactions corresponding to negative and positive.
