The global Valve Bag Making Machines market size is predicted to grow from US\$ 520 million in 2025 to US\$ 816 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Valve Bag Making Machines (valve bag making machines/valve-top paper bags or valve-top woven bags forming equipment) are a type of complete bag making equipment used for the mass production of industrial packaging bags with valves that are compatible with automatic filling. They typically handle processes such as forming, bottom folding, valve application/installation, gluing/heat sealing, punching, counting, and stacking for paper valve bags (multiwall paper valve sacks) and plastic woven valve bags/square-bottom valve bags (such as PP coated woven fabric structures). Their core value lies in making 'bag shape consistency + valve structure precision' into industrial standard components that can be used stably and at high speeds in filling lines. The market size for 'valve bag making machines' was estimated at approximately US\$300 million in 2025. The price range depends heavily on the bag type (paper/plastic), width and speed, degree of automation, and brand: publicly available quotes show prices ranging from around US\$4,500 for basic machines to US\$500,000–600,000 for high-speed square-bottom valve bag production lines (project-based configurations can be even more expensive). The upstream mainly consists of key equipment components and supporting consumables (control systems, servos/drives, heat sealing/gluing and cutting blades, etc.) and bag material raw material systems: the upstream of paper valve bags focuses on sack kraft paper supply (such as Mondi, Smurfit Kappa/Smurfit Westrock, etc., providing kraft paper/paper systems for bags), while the upstream of woven plastic valve bags focuses on PP resin and coated woven fabric systems (the industry is often tied to the woven plastic packaging equipment ecosystem of Starlinger, etc.). The downstream is the powder/granular material industry that requires automatic valve

filling, most typically including cement, lime, mineral powder, chemical powder, and some bulk packaging scenarios for food and feed such as sugar/flour/feed; representative players on the equipment supply side usually focus on mature valve bag process platforms. For example, **Windm?ller & H?lscher (W&H)** has disclosed a systematic 'valve sack concepts' for valve paper bag solutions, and Starlinger has formed a strong industrialization path of 'bag type + equipment' in square bottom valve woven plastic bags (such as AD*STAR).
