According to our LPI (LP Information) latest study, the global Valves and Manifolds market size was valued at US\$ million in 2023. With growing demand in downstream market, the Valves and Manifolds is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Valves and Manifolds market. Valves and Manifolds are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Valves and Manifolds. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Valves and Manifolds market.

Instrumentation valves are devices that are widely used in industrial production processes to control the flow of fluids and gases. The valves can be controlled either physically or automatically. A valve helps to direct, regulate, or control the flow of liquids, gases, fluidized solids, and slurry material through dedicated passageways.

According to the report, a key growth driver is the expanding water and wastewater treatment industry. High-quality potable water is essential for industrial, commercial, and domestic users. Growing population and rapid urbanization are exerting pressure on the existing freshwater resources. Though many developed economies have well-developed water treatment infrastructure, some lack proper distribution facilities. Consequently, water may get contaminated during transit. Various European countries that already have technologically advanced industrial water treatment infrastructure are now focusing on municipal water treatment infrastructure.
