The global Van Loading Ramp market size is predicted to grow from US\$ 531 million in 2025 to US\$ 673 million in 2032; it is expected to grow at a CAGR of 3.5% from 2026 to 2032.

In 2024, global truck loading ramp production reached 2,342,890 units, with an average selling price of \$225 per unit. Truck loading ramps are used to smoothly load and unload vehicles and cargo onto truck beds. They are crucial to logistics operations, ensuring safe and efficient cargo loading and unloading. These ramps are typically made of rust-resistant aluminum alloy, combining strength and lightness. They come in a variety of sizes and capacities and are often surface-treated to enhance traction and reduce the risk of slips.

Truck loading ramps are auxiliary facilities used for loading and unloading cargo. They provide an inclined surface connecting the ground with the truck bed, simplifying the cargo handling process. With the rapid development of the logistics industry, higher requirements for loading and unloading efficiency and safety are being placed on them. Consequently, the design and manufacturing technology of truck loading ramps are constantly advancing. Modern truck loading ramps are not only capable of supporting heavy loads but also offer excellent stability and durability. Furthermore, with the application of automation technology, some ramps are equipped with automatic retraction and locking functions, improving operational convenience and safety. In the future, the development of truck loading ramps will place greater emphasis on intelligence and environmental friendliness. On the one hand, the integration of sensors and intelligent control systems will enable automatic adjustment and remote monitoring of ramps, improving loading and unloading efficiency and safety. On the other hand, with increasingly stringent environmental regulations, the development of low-energy and recyclable materials for truck loading ramps has become a key direction. Furthermore, to meet the needs of diverse application scenarios, the development of

foldable and portable ramps will also become a key trend.
