VAV system was born in the United States in the 1960s. According to the changes of indoor load or indoor required parameters, it can maintain a constant supply air temperature, automatically adjust the supply air volume of air conditioning system, and make the indoor parameters meet the requirements of all air conditioning systems. VAV system consists of four basic parts: VAV terminal device (VAV box, room temperature controller), air handling and conveying equipment, air duct system (fresh air / exhaust air / supply air / return air) and automatic control system. VAV system adapts to the change of load by changing the air volume, which can be realized by special VAV terminal device.

Global Variable Air Volume (VAV) System key players include Johnson Controls, Trane Technologies, Carrier, Daikin Industries, Honeywell, etc. Global top five manufacturers hold a share over 65%.

North America is the largest market, with a share about 35%, followed by Asia Pacific and Europe, both have a share over 55 percent.

In terms of product, Single-Duct VAV is the largest segment, with a share over 55%. And in terms of application, the largest application is Commercial Buildings, followed by Industrial Buildings.
