A Variable Displacement Piston Pump is a type of mechanical-electrical motor placed in a fluid channel. Built either to generate electrical power from the natural flow of fluid past it or to apply mechanical force to make stationary fluid flow in a pipe gives the variable displacement pump a dual use — adjustable capability. Such pumps have versatile applications because they can be set to capture the maximum amount of hydraulic fluid energy as the velocity of fluid flow in a channel dynamically changes, or they can be switched to applying mechanical energy powered by electricity to increase fluid flow.

The global Variable Displacement Axial Piston Pump market size is projected to grow from US\$ 450.8 million in 2023 to US\$ 798.3 million in 2030; it is expected to grow at a CAGR of 8.5% from 2024 to 2030.
