The global Variable Frequency Drive Electric Actuator market size is predicted to grow from US\$ 470 million in 2025 to US\$ 581 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

In 2025, the global production of variable frequency drive (VFD) electric actuators reached 457,400 units, with an average selling price of US\$1,050 per unit. The global annual production capacity of VFD electric actuators is approximately 700,000 units, with a gross profit margin of approximately 25.2%. A VFD electric actuator is a device that uses variable frequency technology to precisely control the speed and torque of the actuator's drive motor. By changing the frequency and voltage of the AC power supply, the VFD controller can optimize the actuator's output speed, positioning accuracy, and start/stop smoothness, while reducing energy consumption and mechanical stress. Common applications include valves, gate valves, valve cores, linear or rotary actuators, especially in systems requiring adjustable speed, flexible control, and energy saving. The upstream raw materials for VFD electric actuators include AC/DC motor stators/rotors, seals, and power and control core components; the midstream consists of VFD electric actuator manufacturers; and the downstream mainly includes industries such as environmental protection, machinery, and construction.
