The variable speed ??nibbler is an electric tool for cutting sheet metal with an adjustable speed function, which can achieve more accurate and efficient shearing operations according to the needs of different materials and thicknesses. Its core working principle is to 'bite' the metal point by point through a high-speed reciprocating punch, resulting in minimal edge deformation, which is particularly suitable for fine cutting of curves, special-shaped edges and complex graphics. The variable speed design allows the operator to flexibly adjust the punching and shearing rhythm according to the hardness and thickness of aluminum, stainless steel or cold-rolled steel plates, improving cutting quality and extending tool life. This tool is widely used in sheet metal processing, auto repair, metal roofing installation and HVAC duct production, combining operational flexibility with industrial-grade durability.

United States market for Variable Speed Nibbler is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Variable Speed Nibbler is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
