Angiography systems are specialized devices that use X-rays or digital subtraction angiography (DSA) to provide real-time imaging of blood vessels filled with contrast agent. They typically consist of a C-arm, X-ray detector, high-voltage generator, and imaging workstation, used for the diagnosis of cardiovascular and cerebrovascular diseases, navigation during interventional treatment, and post-operative evaluation. Upstream suppliers include those providing X-ray tubes and detectors, high-voltage generators, X-ray tubes and C-arm components, contrast agents, operating tables, and protective accessories. Downstream suppliers are primarily general hospitals, cardiovascular and cerebrovascular specialty hospitals, health check-up centers, interventional treatment centers, and manufacturers of cardiovascular and cerebrovascular medical devices for clinical trials and training applications. In 2024, the global market for angiography systems had an average price of US\$650,000 per unit, with sales of approximately 5,500 units. The average production capacity per manufacturing line was 260 units, and the industry profit margin ranged from 20% to 35%.
