The global VCI Aerosols market size is predicted to grow from US\$ 604 million in 2025 to US\$ 730 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

VCI aerosols refer to aerosol products that contain Volatile Corrosion Inhibitors (VCIs). VCIs are chemicals or compounds that are designed to protect metal surfaces from corrosion. VCI aerosols are used to apply a protective, corrosion-resistant film or layer onto metal surfaces by releasing volatile corrosion-inhibiting compounds as a vapor into the surrounding atmosphere. This protective layer helps prevent the formation of rust and corrosion on the metal surfaces during storage and transportation.

Global Expansion: The market for VCI aerosols is expanding globally as industries recognize the need for effective corrosion protection for metal components during storage and transportation.

Industrial Applications: VCI aerosols are widely used in various industrial sectors, including automotive, aerospace, oil and gas, manufacturing, and military, where metal parts and components are subject to long-term storage and transit.

Green and Environmentally Friendly VCIs: Growing awareness of environmental concerns has led to the development and use of environmentally friendly and biodegradable VCIs in aerosols.
