The global Vegetable Peelers market size is predicted to grow from US\$ 114 million in 2025 to US\$ 166 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

Vegetable peelers are tools commonly used in the kitchen for removing the outer skins of vegetables and some fruits. Vegetable peelers can quickly remove the skins of vegetables, reducing the time spent on food preparation. Compared to using a knife to peel, peelers are more efficient and require less skill. They can achieve a more uniform peeling thickness, ensuring that the vegetables are peeled evenly without wasting too much of the edible part. This is especially important when preparing vegetables for cooking or presentation. Different types of peelers can handle a wide range of vegetables and fruits, making them a versatile tool in the kitchen.

With the accelerated pace of life, the emphasis on healthy diet and the popularity of small kitchen appliances, the vegetable peeler market is growing steadily. In particular, as an emerging kitchen gadget, the demand for electric vegetable peelers is expanding. DANA - Technology ApS, Alistar Europe and other companies are representative companies in the global vegetable peeler industry. In addition, brands such as Triangle and Plazotta from Germany and Victorinox from Switzerland also have strong market competitiveness. Triangle peeling knife has a sharp blade, Plazotta fruit and vegetable planer adopts ergonomic design, and Victorinox peeler has excellent material and exquisite craftsmanship. In the future, electric vegetable peelers may incorporate more intelligent elements, such as automatic sensing, intelligent adjustment of peeling thickness, and remote control through connection with mobile phone APP. Vegetable peelers will integrate more functions, such as peeling, slicing, shredding, juicing and other functions at the same time, becoming a multi-functional assistant in the kitchen, saving space and purchase costs for consumers. In terms of material selection, more environmentally friendly and recyclable materials will be used to reduce the impact on

the environment; product design will also focus on maintainability and durability to reduce the frequency of product upgrades and achieve sustainable development.
