A Vehicle Access Barrier is a heavy-duty security barrier installed within roadways at critical access points that prevents unauthorized vehicle entry by raising a reinforced steel barricade from the ground when activated via hydraulic or pneumatic actuators. These systems are commonly deployed at high-security facilities such as airports, government and military sites, and other sensitive infrastructure, serving as anti-ram defenses capable of halting high-speed vehicular threats. The upstream supply chain of a Road Blocking System includes suppliers of raw materials and specialized components such as high-strength steel, hydraulic pumps, and electronic control units, along with construction and installation contractors responsible for on-site deployment of the barrier. Downstream, the supply chain encompasses end users such as airports, government facilities, and other organizations that operate these systems, as well as security system integrators who incorporate road blocking systems into broader access control solutions; it also includes dedicated maintenance service providers responsible for ongoing system upkeep and certification bodies that test and certify the systems to meet stringent safety and crash-resistance standards.
