Abstracts

The global Vehicle Body Sticker market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Vehicle Body Stickers are adhesive graphics or designs applied to the surface of vehicles, primarily for decoration, personalization, advertising, or informational purposes. They are made from various materials, with vinyl being the most common due to its durability and weather-resistant properties.

With the decline in the price of car stickers and the improvement of the requirements for the use of the car body, many car stickers have changed their uses, such as being used to stick KT plates for display. There are more and more machines in China that use weak solvent inks, and car stickers have occupied an increasing share in the market as an indoor and outdoor advertising material.
