Like electric vehicles, hydrogen-powered vehicles are currently limited by their range. An innovative hydrogen storage tank could be the technology that enables vehicles powered by this environmentally friendly fuel to travel long distances. Electric vehicles can run not only on lithium batteries, but also on hydrogen in an environmentally friendly and quiet manner. A kilogram of gas contains almost three times as much energy as a kilogram of crude oil. Hydrogen-powered vehicles currently on the market offer a range

of about 500 kilometers. There are five types of hydrogen fuel tanks: aluminum inner liner fiber winding, plastic inner liner fiber winding, no inner liner fiber winding, pure steel metal, steel inner liner fiber winding, among them, pure steel metal, steel inner liner fiber winding Due to the serious problem of hydrogen embrittlement, the model cannot be used in vehicles.
