High-pressure gaseous hydrogen storage containers are mainly divided into pure steel metal bottle (type I), steel liner fiber winding bottle (type II), aluminum liner fiber winding bottle (III type) and plastic inner liner fiber winding bottle (IV type)) 4 types. Types I and II have low hydrogen storage density and poor safety performance, making it difficult to meet the requirements of vehicle-mounted hydrogen storage density. With the advantages of improving safety, reducing weight, and improving mass hydrogen storage density, type III and type IV bottles have been widely used in vehicles.
