Vehicle interior air quality testing is a process of evaluating and measuring the quality of air inside a vehicle cabin. It involves assessing the levels of various pollutants, such as volatile organic compounds (VOCs), particulate matter, carbon monoxide, nitrogen dioxide, and other harmful gases. The testing is conducted to ensure that the air inside the vehicle is safe and free from contaminants that could potentially harm the occupants' health. It is particularly important for vehicles with enclosed cabins, such as cars, trucks, buses, and other modes of transportation, as people spend a significant amount of time inside these vehicles. The testing can be done using specialized equipment and sensors to measure and analyze the air quality parameters.
