Vehicle light weighting is an idea in the automobile business about structure vehicles and trucks that are less heavy as an approach to accomplish better fuel efficiency and handling. Carmakers make parts from carbon fibre, windshields from plastic, and bumper out of aluminium foam, as approaches to reduce vehicle load. The use of these materials is selected on the basis of their price, lightweight ability, ultimately, processing or consumption limitations. Advanced lightweight technologies help to improve automotive fuel consumption and guarantee safety and performance. Usage of lightweight materials reduces emissions by nearly 0.08g CO₂/Kg, as with launching of battery electric vehicle, which boosts application of light weighting technology in automotive systems.
