OPA (phased array) lidar is a type of lidar that uses optical phase control array technology to achieve laser scanning. The OPA transmitter is composed of multiple independently controllable transmitting and receiving units. Changing the voltage loaded on them can change the characteristics of the light waves emitted by each unit, and then by adjusting the phase relationship between the emitted light waves, mutual enhancement can be achieved in a certain direction. Interference produces a directional, high-intensity beam.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the
