Vehicle Suspension Test Bench is a specialized diagnostic platform designed to evaluate the performance and condition of a vehicle’s suspension system. It simulates real-world driving conditions by applying controlled vibrations, loads, or movements to the vehicle’s wheels or chassis, allowing technicians to assess shock absorbers, springs, struts, and overall suspension integrity. This testing helps identify issues such as uneven damping, imbalanced suspension response, or worn components, ensuring vehicle safety, comfort, and handling performance. Suspension test benches are commonly used in automotive workshops, inspection stations, research facilities, and quality control departments of vehicle manufacturers.
