Velometer is an instrument that is used to measure the speed of air. Velometer is the device that is most commonly used to measure or read the flow of air out of diffusers.

Measuring the speed of air is important to maintain balance in the air which helps in identifying the conditions that are undesirable such as drafty areas, stagnant areas, hot or cold rooms, objectionable noises, contaminated air, and others. This, in turn, helps in lowering the operation cost and conserve the energy. It also helps in providing safe and healthier air thereby providing great satisfaction.
