The global Vented Gauge market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Vented Gauge is a sensor used to measure changes in pressure relative to atmospheric pressure. It is also known as an atmospheric gauge or zero gauge pressure sensor. A vent gauge pressure sensor is connected to the atmosphere and usually has a vent or vent line to allow it to equalize to the ambient air pressure. As the pressure changes, the sensor measures the difference relative to atmospheric pressure. Therefore, it provides a measurement of relative pressure rather than absolute pressure.
